Customer Display

The customer display welcomes the customer and provides the instructions for performing transactions at the terminal. An optional touch screen display eliminates the need for function keys.

Function keys

The function keys are made up of four keys mounted on each side of the customer display. The customer selects from the choices shown on the customer display and presses the corresponding function key.

Receipt Printer Slot

After the customer uses ATM, the receipt printer prints the transaction information on a form. ATM presents the form through the receipt printer slot on the upper fascia.

Customer keypad (Encryption PIN Pad)

During the transaction sequence, ATM prompts the customer to use the customer keypad to enter transaction information. The 16-key keypad uses a security module and encrypting PIN pad technology to secure the information entered by the customer at the keypad.

Dip Card Reader

The dip card reader is a manually operated device mounted directly to ATM fascia. The cardholder inserts an ATM card in the card entry slot and then removes the card to begin the transaction. The dip card reader can read magnetic stripe cards and memory chip cards. The dip card reader cannot retract, capture, or retain cards.

Cash Dispenser

When the cardholder requests cash, it is presented through the cash dispenser in the lower fascia.

3.3 LCD & Customer Keypad

The customer display welcomes the customer and provides instructions for performing transactions at ATM.

During the transaction sequence, ATM prompts the customer to use the customer keypad to enter transaction information. The 16-key keypad uses a security module and encryption PIN pad technology to secure the information entered by the customer at the keypad.

3.4 Cash Dispenser Unit

The cash dispenser delivers media (cash) to the cardholder after the cardholder's request is processed by the network and the software. The media is drawn from the cassettes and transported to a slot in the fascia of ATM, where the cardholder can receive it. If the media is too mutilated or wrinkled to dispense, or if a multiple pick occurs, the dispenser sends the notes to the reject bin.

A.2 How to Empty the Reject Bin

1) Insert the reject box key, turn it clockwise.
2) Open the lid of reject box.

3) Take bills from the reject box and close the box with key.

[PRECAUTION!]
Don't recycle any bill in reject box into cassette. Doing so will cause not only the same reject problem, but other unexpected problems such as note jams on cash dispenser

A.3 How to Clear Notes Jam
1) Turn power off first and pull the rail of CDU outward while pressing the green button on the CDU.
2) Turn the pulley located in left upper in order to move jammed note into a well removed position.
3) Take out the jammed note carefully.

4) Remove the cash cassettes to check whether there is any jammed note inside of CDU body. If so, remove the jammed note from it.

[WARNING!]

If the belt is detached from the Roller, the lifespan of the belt can be dramatically reduced which can result in breakage. Therefore, it is extremely important to check if the belt is positioned correctly after removing the jammed bills.

Paper Handling Precautions

1) Store it away from high temperature and humidity:

   If the paper is stored in a place where temperature is above 50℃ [122℉] or humidity is above 90%

   RH, the coloring capability may deteriorate or the paper surface may inflate.

2) Refrain from exposing to direct sunlight:

   The paper surface can be inflated if you expose it to direct sunlight or leave it under the fluorescent

   lamp for a long time.

3) Keep it away form the organic solvents:

   Paper color may change if the paper comes in contact with organic solvents or glues containing

   organic solvent.

4) Keep it away from plastics:

   If the paper comes in contact with materials containing plastics, its coloring capability may

   deteriorate or de-coloring of the paper may occur.

5) Store the paper roll separately to prevent damage to the paper.

6) Do not connect the papers with tape.

7) Make sure the paper end is not attached to the paper pipe.

8) Make sure the paper is rolled evenly.

9) Miscellaneous:

If the paper comes in contact with carbon copy paper or if the paper surface is scratched with a metallic object, de-coloring may occur.

4.3.2 How to load the receipt paper

Prior to loading the receipt paper, the following must be kept in mind.

NOTE:

1) Load a paper roll into the unit with the shape of the roll kept intact. (Deformed roll may cause jamming.)
2) The leading edge of the roll shall neatly be cut prior to loading the roll. Correct shape of the paper roll

1) Open the Front Panel with key and pull this outward completely with hands. (Please see the Chapter 4.1.2)

HYOSUNG
NAUTILUS HYOSUNG INC.

2) Prepare the new paper roll. Please see the NOTE described below
Roll Guide

3) Remove the roll guide by carefully pulling it off.

NOTE:
1. Make sure the roll is in its proper roll form.   (A deformed roll may cause jamming problems)
2. When replacing the new roll, make sure the end of the roll paper has a clean cut.   (See the below figure.)

Roll Guide

Lower Guide   Upper Guide
4) Add the receipt paper into the rod and then insert the roll guide tightly again to fix it.

5) The shiny side of the paper should be faced up to be printed properly and the metallic tension guide should be surrounded with paper to reduce the tension during feeding.

6) Insert the leading edge of paper between lower guide and upper guide of the receipt printer slowly. When the machine is initialized, the paper is going to start feeding.

HYOSUNG
NAUTILUS HYOSUNG INC.
7) If the paper does not feed at all during initializing, make sure that paper has a CLEAN CUT at the end and the Thermal Print Head (TPH) is closed as shown in left picture.

8) When finished loading paper, close the Front Panel and remove the key.

Chapter 6. Installation

6. Installation

6.1 Installation Information

Installation condition and space

Following conditions should be met before installing equipment.

1. Temperature should be between 5 ~ 40°C [41~104°F] (operating), -10 ~ 60°C [14~140°F] (storage).

2. Relative humidity should be between 25~85% (operating) / 10~90% (storage)

3. Avoid locations where intense direct light is reflected off the LCD screen.

4. Avoid locations where strong static electricity can occur.

5. Avoid placing the product next to equipment that produces electromagnetic waves. It could interfere with data transfer.

6. The floor must allow easy wheelchair access from the front or the side.

7. Space required for servicing the machine should be considered before installation.

Tools required for installation

In order to move the machine and place it in a proper location, you need to get help of professionals trained in moving heavy equipment.

Following tools are needed to install the machine.
- Wire cutter
- Lifter
- Screw driver (Flat, Phillips)
- Wrench (Spanner)
- Leveling tool

6.2 System Installation

Unpacking

1. Unpack the machine on top of the palette.
2. Cut the straps that are fastened around the box with a knife.
   (Be careful when cutting the straps.)
3. Use an appropriate tool to remove the nails from the palette.
4. Remove the lid, and then box from the top. Do not discard the packaging materials until you have verified any shipping damage claim. Contact your distributor immediately if you see any shipping damage. Store the box in a safe place to re-use or discard of appropriately.
5. Verify the contents carefully with the packing list to be sure all items listed are included.   Notify your distributor of any shortages.
6. If only the palette needs to be removed, lift the whole machine from the bottom and set it aside.

Physical Installation

To install this ATM, perform the following steps.

1. Place the "Anchor bolts locate sheet" at the place where the machine is to be installed. (refer to Fig. 6.1)
2. Place the system on a flat surface.
    Be careful when opening the top or bottom of the machine because it can be off balance
3. Place the Anchor nuts into the ground according to the anchor bolts locate sheet.
   (4 places)
4. Place this ATM on top of the sheet.
5. Open the Security cover with the key provided.
6. Using the supplied combination (factory preset at 1-2-3-4-5-6 or 50-25-50) open the Security Door. This combination should be changed as soon as possible.   Refer to Chapter 4 for instructions on changing the lock combination.
7. After the anchor nuts are in place according to the anchor holes on the bottom of this ATM, tighten the anchor bolts tightly. (refer to Fig.6.1)

NOTE: All the unit in the dimension is mm and the unit in the parenthesis is inch.

Anchor Setting

1. Select an appropriate installation area and place this label accordingly to the above picture on the floor. Place keep minimum distance from the wall or object.

   (Notice) When you install ATM between the wall and the object, the front of ATM must stick out approximately 50mm [2 inch] from the wall so that front door can be opened without any problems.

2. Make 4 anchor holes.

3. Place ATM over the fixed label so that anchor holes line up according to the picture.
